

Topic:

The European parliament, commission and counsel have reached an agreement on the General Data Protection Regulation (GDPR) text. This will replace the Data Protection Directive from 1995 and aims at protecting the EU citizen's personal data in the current digital world whilst harmonizing the legislation for the processing of personal data across the whole EU. The challenges in the area of risk management and internal control are thus becoming more important. On the one hand there is the increasing regulation, on the other hand, risks are also becoming much more complex.

In this session, the following topics will be addressed:

- Accountability of data owners to demonstrate compliance
- Rationalization and integration of GDPR controls into existing RCM's
- The importance of a corporate culture
